Tasks and problems	**Implementation and/ or attempts**
One person-one project, too much logistical weight, neglects synergy of efforts	Organizing project groups under umbrella ideas - enforce 1-2 weekly subgroup meetings. Have a platform to identify common goals?
Channels of public communication	Manager? Identify public channels used in local community, find way of how these complement internal comm
Use of communication tech, distributed throughout proprietary software	Mailing list survived, Trello etc. needs workshops and supportive daily infrastructure
Planning meetings - too often or not enough, and always too long, ineffective	One each week. Set time. Monday Morning pattern. Allow unsatisfied residents to prototype their own.
Kitchen duties	Weekly sign up chart with slots for 3 meals a day, minimum number everyone must take. Chefs responsible for clean up, unless others step in/ many guests. If you invite someone to a meal, you're cooking.
Food shopping	One person manages, money collected out of common pot, additional purchases evaluated and reimbursed after end of one month cycle. Spreadsheet tracking purchases (local, organic, no alternative).
Cleaning	Broom Day
Event organization	Trello assignments, failed - separate mailing list with all involved. Talk to MTC about this.
Daily Routine	Morning bell, liturgy, free to opt out, light obligation
sudo Leadership	Smaller subgroups for particular tasks (initiative on Living and Working as unMon) more effective on establishing a protocol, difficult when brought to democracy with participants less involved in the process/ different stakes

Waste	Zero Waste System, needs strong enforcer/ no alternative system, collect bin of unreusable waste - what to do with this?
Stakeholders - how to identify and satisfy the needs of stakeholders without comprising autonomy/ identity in local comm - how to use these resources rather than their limitations	
Conflict resolution	Private talks, communal circles...
Complaining	BAN COMPLAINING.
